

5 WARNING SIGNS YOUR TREE IS ABOUT TO FALL: HOW TO PREVENT A DISASTER

www.treenewal.com

Introduction

It is a beautiful day, and you are out in your backyard enjoying the sunshine and fresh air. Suddenly, you hear a loud cracking noise. You look up and see that one of your trees is about to fall! If you are not prepared, this can be a disaster. In this blog post, we will discuss five warning signs that your tree is about to fall over. We will also share some tips on how to prevent this from happening.

Why Do Trees Fall?

There are a number of reasons why trees fall over. The most common cause is that the tree has been damaged by wind or storms. Other causes include disease, poor root system, and old age. In some cases, trees are simply not well-suited for the location where they are planted.

Warning Signs That Your Tree Is Falling

There are several warning signs that you can look for if you are concerned that your tree may be at risk of falling. If you see any of these warning signs, it is important to take action immediately.

Cracks in the Trunk or Branches

This is often the first sign that something is wrong with your tree. If you see any cracks, it is important to have a professional tree care company take a look at your tree as soon as possible. Cracks can weaken the structure of the tree and make it more likely to fall.

Leaning

If your tree is leaning to one side, it could be a sign that it is not as stable as it should be. This can be caused by a number of factors, including a poor root system, damage, and disease.

Dead Branches

Dead branches are another sign that your tree is not healthy. Dead branches can fall off at any time, which can be dangerous. If you see any large dead branches, it is important to have them removed by a professional.

Signs of Decay

Decay is another sign that your tree is not healthy. Often decay is caused by disease. Decay can weaken the tree and make it more likely to fall. Signs of decay typically include mushrooms growing at the base of the tree, cracks in the trunk, and holes in the bark. Have your tree tested by an ISA Certified Arborist for an official diagnosis to create the best action plan for treatment.

Sunken Soil

If you see that the soil around your tree is sunken in, it's a sign that the roots are not as strong as they should be. This can be caused by a number of factors, including drought, poor drainage, and compaction. If you see this warning sign, it's important to take action to improve the soil around your tree.

Preventing Your Tree from Falling

There are a few things you can do to prevent your tree from falling.

Have Your Tree Checked Regularly:

It is important to have your tree checked by a professional on a regular basis. They will be able to identify any warning signs and take action to prevent the tree from falling.

Remove Dead Branches

Dead branches should be removed as soon as possible. This will help to prevent them from falling. Be sure to call a professional tree care service like TreeNewal to take care of this for you so no further damage is incurred in the process.

Support the Tree

If your tree is leaning, you may need to provide support for it. This can be done by staking the tree or adding guy wires.

Plant the Right Tree in the Right Location

It is important to choose a tree that is suited for the location where it will be planted. This will help to prevent the tree from falling over.

If you are concerned that your tree may be at risk of falling, it is important to take action immediately. By taking some simple precautions, you can prevent a disaster. If disaster does strike, be sure to call TreeNewal, the professional tree care company that can help you handle any of your tree care needs.

If you need advice or assistance with keeping your trees upright, get in touch with the ISA Certified Arborists at TreeNewal and enjoy tailored tree care advice.
